

# EMBEDDED SYSTEMS SEMINAR

The embedded systems Seminar was held by Dr.Saurabh Mehta on 16th of March,2017. This was another interesting seminar which gave us an insight of how the embedded systems form a base of every smart technology today. The seminar introduced us to some of the basic, yet highly potential embedded systems. The seminar began with a brief introduction of the Speaker, Dr. Mehta, who is an IIT-B alumnus and presently the founder and CEO of a firm which is into innovation of smart embedded systems based user friendly technologies.

We were then showed a series of DIY projects and were encouraged to try out different projects, as it increases our subject knowledge, we can work upon higher versions of such projects to gain an extra edge over the others. This also makes us market ready, as we know things beyond the curriculum and also are aware of what the market needs! The seminar had an overwhelming attendance of over 110 students from the second and third year crowding a classroom of 60 students! This seminar opened the doors of a totally new world for us. The students inclined towards the research made the most out of this seminar. It was followed by a brief discussion session, where the students freely interacted with Dr Mehta. The session was concluded by a thanksgiving speech by The HoD of EXTC, Dr. Amit Deshmukh.

Dr. Amit A. Deshmukh

(Professor and Head, EXTC Dept.)
